

SARA TAYYAB JANJUA

Full-Stack Developer | Flutter Engineer | AI Enthusiast

LinkedIn-Sara (Janjua) Tayyab • 0333-2237207 • sarajanjua@gmail.com

PROFESSIONAL SUMMARY

Highly driven Computer Science undergraduate (8th Semester) with strong expertise in full-stack development, Flutter mobile engineering, backend systems, AI-based applications, and database architecture. Experienced in building scalable fintech solutions, AI-powered applications, and cross-platform mobile apps.

Proven ability to contribute to real-world production systems (banking, automotive, AI products) with hands-on experience in Laravel, Flutter, Supabase, Firebase, and Neural Networks. Passionate about combining technical execution with product thinking and project leadership.

EDUCATION

SZABIST University — BS Computer Science (2022–2025)

- Currently in 8th Semester
- CGPA Year 1: 3.92
- CGPA Year 2: 3.84
- CGPA Year 3: 3.64
- 7th Semester GPA: 3.79

Beaconhouse School System — Matriculation (2015–2020)

Python Certification — NED-UET (2023)

Pre-Schooling — London, UK

TECHNICAL SKILLS

Mobile Development – Flutter (Advanced)

- State Management: Provider, Riverpod (conceptual), setState architecture
- REST API integration
- Supabase & Firebase integration
- Authentication systems (JWT, Firebase Auth)
- Real-time data sync
- Push notifications
- Offline-first architecture
- Clean architecture principles
- Modular code structuring
- Responsive UI design
- Animations & Custom Widgets
- Google Maps API integration

- Local storage (SQLite, Hive – conceptual)
- App performance optimization
- Debugging & production build releases

Backend Development

- Laravel / PHP
- MVC Architecture implementation
- RESTful API development
- Authentication & Role-Based Access Control
- Admin dashboards
- Database migrations & optimization
- Middleware & routing systems
- Secure session management
- Payment & fintech system integrations
- Team management modules
- Navigation constraints & role-specific access control
- Eloquent ORM usage

Python

- Flask backend development
- REST API creation
- Neural Network implementation (MLP models)
- Data preprocessing & model training
- Model evaluation & tuning
- Numpy, Pandas usage
- Scikit-learn basics
- AI integration into web systems

Programming Languages

- C++: OOP, Data Structures (Stacks, Queues, Trees, Graphs), STL, File Handling
- C#: OOP, Basic .NET concepts, Console Applications
- Java: OOP, GUI basics
- C: Memory handling, structured programming
- JavaScript: DOM manipulation, API calls, ES6 fundamentals
- React JS (Basic): Functional components, props, state, hooks (useState), basic routing

Databases

- MySQL (Joins, indexing, query optimization)
- Supabase (PostgreSQL backend, auth, storage, RLS policies)
- Firebase Firestore (real-time DB)
- MongoDB (basic CRUD)
- SQLite (mobile storage)

Cloud & Backend Services

- Supabase authentication & Row-Level Security
- Firebase Auth & Firestore
- Storage buckets integration
- API security handling
- Real-time database syncing

Data & Analytics

- Power BI (Dashboard creation, data visualization)
- Data cleaning & transformation
- KPI dashboard design
- Data modeling basics

Tools & Environment

Git, GitHub, VS Code, Android Studio, IntelliJ, Dev C++, Linux CLI

WORK EXPERIENCE

The Synergates Business Solution (present)

- Working on real-world web systems using PHP (Laravel)
- Developing and maintaining REST APIs
- Handling backend logic, database operations, and system workflows
- Using Postman for API testing and validation
- Collaborating with team on debugging and feature improvement

UHF Solutions (Fintech / Banking)

- Contributed to backend development of Meezan Online Banking (Admin Side)
- Built admin-side modules using Laravel/PHP
- Implemented Team Management System
- Developed role-based navigation constraints
- Improved dashboard logic & database queries
- Assisted in API integrations
- Collaborated with fintech engineering teams
- Troubleshoot production-level backend issues

Source Code Experience – eBook Upsell Platform (6 Months)

- Assisted in backend logic improvements
 - Worked on feature enhancements
 - Optimized UI flow for conversion
 - Supported deployment and debugging
 - Contributed to performance optimization
-

PROJECTS WORKED

SafeCity Karachi

- Developed features using PHP (Laravel) & MySQL
- Worked on user reporting system & data handling workflows
- Implemented backend logic for secure data submission and storage
- Assisted in improving system reliability and usability

Meezan Online Banking Application (Admin Side)

- Developed backend modules using Laravel & MySQL
- Implemented secure role-based navigation & admin controls

KIA Motors Web System (Frontend Contribution)

- Built responsive frontend using HTML, CSS, JavaScript
- Improved UI/UX and navigation experience

Ringo AI (Flutter Application – FYP Project)

- Tech Stack: Flutter, Supabase, Firebase, AI Integration
- Built full cross-platform mobile application
- Implemented state management architecture
- Integrated Supabase authentication and database
- Implemented real-time data synchronization
- Designed scalable backend structure
- Implemented wake-word detection architecture (conceptual)
- Integrated Maps API for GPS tracking
- Built modular and maintainable codebase
- Designed clean UI with performance optimization
- Prepared system for AI-based device detection feature
